

COMPANY PROFILE

We engineer businesses, not just software.

Business. Finance. Tech.

Enterprise AI implementation and software engineering for
organisations across Singapore and Southeast Asia.

SINGAPORE | INDONESIA | 20+ YEARS

StarTech Innovation Pte Ltd

WHO WE ARE

A Singapore software house that ships.

We design and build production systems — enterprise AI, ERP, financial platforms and healthcare software.

We are implementers, not advisors. Every engagement ends in running software. We work natively across Singapore and Indonesia, in five languages.

20

Bounded contexts in our ERP platform

9,839

Automated tests, all passing

300+

Edge locations for sub-100ms inference

5

Languages delivered natively

ENGINEERING EVIDENCE

Numbers you can audit, not adjectives.

Measured by running the system. Every figure is reproducible from the build.

TEST SUITE

9,839

9,273 unit · 549 integration · 17 architecture. Integration runs against real PostgreSQL — no mocks.

CODEBASE

1,329

Java files across 102 REST controllers and 461 calculation classes, in 20 bounded contexts.

VERIFICATION

5 engines

The same transactions recomputed by Java, PostgreSQL, Python, hledger and Odoo. Any disagreement fails the build.

STATIC ANALYSIS

0 findings

SpotBugs and OWASP scanning on the build gate, plus ArchUnit tests that fail on a layer breach.

WHAT THAT DISCIPLINE CATCHES

A signing error had accumulated depreciation *increasing* the book value of equipment instead of reducing it. A conformance test caught it against an accountant's own figure — 337,590 expected, 342,390 reported. Found by the harness, not a customer.

HOW WE BUILD

Architecture that survives contact with production.

01 Domain-driven, modular

Hexagonal architecture with explicit bounded contexts. ArchUnit tests enforce layer boundaries, so the design cannot erode.

03 Correctness as a build gate

Pure calculation classes with no I/O, verified against independent engines and fuzz-tested for reconciliation.

02 Multi-tenant by design

Schema-per-tenant isolation, OAuth2 / JWT via Keycloak, and Hibernate Envers auditing every state change.

04 Edge-native deployment

Cloudflare Workers with D1, R2, KV and Vectorize — sub-100ms inference across 300+ locations, no cold starts.

DATA & AI

Production AI, not demos.

Multi-model systems in production — the model is chosen per task, not locked to one vendor.

01 Multi-LLM routing

A routing layer over Claude, GPT and Gemini. Switching the default model on a live system is configuration, not a rewrite.

02 Retrieval over your data

Vector embeddings with hybrid semantic and keyword search, plus source attribution on every answer.

03 Multimodal pipelines

Vision models for documents and screens, Whisper speech-to-text, voice synthesis in 50+ languages.

04 Guardrails and evaluation

Hallucination controls, token-cost optimisation, and versioned evaluation before anything ships.

SELECTED WORK

Systems running in production.

Multi-tenant ERP platform

ENTERPRISE · SINGAPORE & INDONESIA

Java 21 / Spring Boot with a Singapore payroll compliance engine. 20 bounded contexts across finance, HR, inventory, manufacturing and logistics.

9,839 tests · 102 controllers · 5-engine verification

AI performance co-pilot

PROFESSIONAL SERVICES · SINGAPORE

A personal AI co-pilot for knowledge workers — four reasoning modes, peer coordination across departments, layered context.

Multi-LLM · Whisper STT · vision capture · D1 / R2 / Vectorize

Patient-owned health platform

HEALTHCARE · INDONESIA & SEA

Trilingual platform run from Singapore under Singapore-only data residency. Lifestyle tracking, insurance onboarding and an AI advisor are live.

API-first · encrypted at rest · PWA

Vehicle trading & logistics OS

CROSS-BORDER TRADE · JAPAN

Full operational rebuild for a vehicle exporter — inventory, role-scoped CRM, invoice and shipping document generation, two-level payment routing.

Live in production · bilingual JP / EN

TECHNOLOGY

The stack we actually run.

LANGUAGES

Java 21 · TypeScript · Python · SQL

AI

Anthropic Claude · OpenAI GPT · Gemini ·
Whisper · ElevenLabs · HeyGen

BACKEND

Spring Boot · Hono · Node.js · PostgreSQL ·
Redis · Drizzle

FRONTEND

React 19 · TanStack Start / Router / Query ·
Tailwind

CLOUD & EDGE

Cloudflare Workers, D1, R2, KV, Vectorize ·
AWS Bedrock, SageMaker, Lambda · Neon

QUALITY & OPS

JUnit 5 · Testcontainers · ArchUnit · Playwright
· SpotBugs · OWASP · Flyway · Keycloak

HOW WE WORK

Strategy to production in 90 days.

WEEK 1-2

Discovery & readiness

Opportunity report & ROI projections

WEEK 3-4

Solution architecture

Technical architecture & implementation plan

WEEK 5-8

Proof of concept

Working PoC with core capabilities

WEEK 9-11

Production deployment

Production system ready for users

WEEK 12+

Optimisation & support

Performance reports & recommendations

Compliance is designed in from week one — Singapore Employment Act, PDPA, MAS, GST, CPF, IRAS; Indonesia BPJS and OJK.

CONTACT

Startech Innovation Pte Ltd

Singapore-based. Building production software for organisations across Singapore, Indonesia and Southeast Asia.
