TECHNICAL PROFILE

Software built to be checked.

Business. Finance. Tech.

How StarTech Innovation designs, tests and hands over production systems — for the technical lead who will review the work. Every figure can be walked through on a call.

WHO WE ARE

Founder-led, start to finish.

A Singapore-based custom software house, not a product vendor. We build the system around how the business actually runs, for companies that have outgrown spreadsheets, off-the-shelf tools, or a vendor that did not deliver.

Every engagement is led personally by the Managing Director, start to finish, with specialists brought in as the work demands. You review code with the person who wrote it.

9,839

Automated tests passing in our internal ERP build, not deployed (August 2026 run)

2

Money-losing bugs caught before release on a live client system

12

Weeks from discovery to deployment, for a typical full build

20+

Years combined business and engineering experience

This document contains commercially confidential information and is intended solely for the named recipient.

ENGINEERING EVIDENCE

Numbers you can audit, not adjectives.

From our internal ERP build, in development and not yet deployed. Measured by running it; the verification report names the test behind each figure.

TEST SUITE

9,839

9,273 unit · 549 integration · 17 architecture, 0 failures. Integration tests run against real PostgreSQL in Testcontainers.

CALCULATION LAYER

7,060

Tests over 484 calculation classes with no I/O. The whole set runs in about 12 seconds, with no database.

ARCHITECTURE

17

ArchUnit tests that fail the build on a layer breach, so module boundaries cannot quietly erode.

STATIC ANALYSIS

0

SpotBugs findings at threshold. The scan runs in the build, so a new finding fails it.

THE SAME DISCIPLINE ON A LIVE CLIENT SYSTEM

Rebuilding a cross-border trading system, a re-imported bank statement was silently doubling receipts — the bank issued no transfer ID to key a duplicate check on. Caught in testing, not by a customer.

This document contains commercially confidential information and is intended solely for the named recipient.

HOW WE BUILD

Architecture that survives contact with production.

01 **Modular, with enforced boundaries**

Explicit module boundaries, checked by ArchUnit tests that fail the build on a layer breach — so the design cannot quietly erode.

02 **Business rules as pure code**

Calculations live in classes with no I/O, so each rule is tested scenario by scenario, in seconds, without a database.

03 **Real databases in tests**

Integration tests run against real PostgreSQL in containers, not mocks, with schema changes versioned in Flyway.

04 **Infrastructure you own**

Deployed on your cloud account, your database and your repository, with documentation so any engineer can take it over.

This document contains commercially confidential information and is intended solely for the named recipient.

DATA & AI

AI that shows its sources.

The model is chosen per task, not locked to one vendor — and every answer can be checked against where it came from.

01 Multi-LLM routing

A routing layer over Claude, GPT and Gemini, delivered on a client co-pilot. Changing the default model is configuration, not a rewrite.

02 Answers from your documents

Retrieval over the client's own documents, with the source shown, so staff can check an answer rather than trust it.

03 Documents and speech in

Vision models read receipts, invoices and forms; Whisper turns speech into text. The structured result goes straight into the workflow.

04 A person signs off

Guardrails against made-up answers, cost controls on model calls, and human review wherever an answer moves money or reaches a customer.

This document contains commercially confidential information and is intended solely for the named recipient.

SELECTED WORK

What we have built, and where it stands.

Client names withheld under confidentiality. Each card says where the work stands.

Operations system for a vehicle exporter

CROSS-BORDER TRADE · JAPAN

Replaced spreadsheets and a CRM from an earlier vendor that the team could not use: inventory, role-scoped CRM, invoice and shipping documents, bank-statement import.

Live with the client · bilingual JP / EN · 2 money-losing bugs caught before release

AI co-pilot over a company's own documents

AI IMPLEMENTATION · SINGAPORE

Answers from the client's own documents rather than a generic model's guess, with routing across several language models.

Delivered; engagement completed in 2026 · multi-LLM · Whisper STT · D1 / R2 / Vectorize

An ERP we build in-house, to show how we test

INTERNAL BUILD · TESTED, NOT DEPLOYED

A multi-tenant ERP backend: 7,060 automated tests across its 484 calculation classes. Not deployed for any client, and we make no accuracy claim for it.

Java 21 / Spring Boot · 115 REST controllers · 9,839 tests in the August 2026 run

Demos you can try before you commit

PRE-SALES · JAPAN & SINGAPORE

Used-car export demos on our Japan site — auction, shipping tracking, export quotes — and thirteen more on our Singapore site.

japan.startech-innovation.com · startech-innovation.com/solutions

TECHNOLOGY

The stack we actually run.

LANGUAGES

Java 21 · TypeScript · Python · SQL

BACKEND

Spring Boot · Hibernate · Hono · Node.js · PostgreSQL · Drizzle

CLOUD & EDGE

Cloudflare Workers, D1, R2, KV, Vectorize · AWS Bedrock, SageMaker, Lambda · Neon

AI

Anthropic Claude · OpenAI GPT · Google Gemini · Whisper

FRONTEND

React 19 · TanStack Start / Router / Query · Tailwind

QUALITY & OPS

JUnit 5 · Testcontainers · ArchUnit · Playwright · SpotBugs · OWASP Dependency-Check · Flyway

This document contains commercially confidential information and is intended solely for the named recipient.

HOW WE WORK

Discovery to production, on a schedule you can plan around.

WEEK 1–2

Scoping sprint

Sit with the people doing the work · written scope, cost and a clickable demo

WEEK 3–4

Architecture

Technical design · firm price and delivery date agreed in writing

WEEK 5–8

Build

Working system against real data · weekly check-ins, not a reveal at the end

WEEK 9–11

Deployment

Testing, staff handover · deployed on infrastructure you own

WEEK 12+

Care plan

Monthly hosting, fixes and small changes · documentation so any engineer can take over

> Timelines scale with scope — this is the shape of a mid-size engagement, not a fixed promise. You get the real schedule after discovery, in writing. For Singapore companies, we check whether the project qualifies for EDGE Grant support before you commit.

CONTACT

Send us one spreadsheet.

Pick the spreadsheet you would most like to replace, and we will show it working as a system — free, no commitment. Or book a call, and we will walk you through how the figures in this deck were measured.
