

CAPABILITY DECK

We build the software your business runs on.

Business. Finance. Tech.

A Singapore-based custom software house. We design and build production systems for companies that have outgrown spreadsheets, off-the-shelf tools, or a vendor that did not deliver.

WHO WE ARE

A small team that ships.

StarTech Innovation is a custom software house, not a product vendor. We do not sell you a shelf system and hope it fits — we build the system around how your business actually runs.

Every engagement is led personally by the Managing Director, start to finish, with specialists brought in as the work demands. You deal with the person who writes the code and signs the delivery.

4

Production systems delivered and live

7,060

Automated tests behind our largest build

2

Markets served natively — Singapore, Japan

20+

Years combined business and engineering experience

HOW WE WORK

We are hired to fix what did not work the first time.

Three of our four production systems started because an earlier vendor, or an off-the-shelf tool, did not hold up. That shapes how we build.

DISCOVERY FIRST

Week 1

We sit with the people doing the work before writing code. You own the output either way.

FIXED SCOPE, CLEAR COST

Before build

A price range on the first call, a firm number after discovery — agreed in writing before work starts.

TESTED, NOT DEMOED

Every build

Tests written against the real business rules, not the happy path. Our largest system carries 7,060.

YOU OWN THE BUILD

At delivery

Deployed on your cloud account, your database, your repository. Any engineer can take it over.

WHAT THAT DISCIPLINE CATCHES

Rebuilding a cross-border trading system, a re-imported bank statement was silently doubling receipts — the bank issued no transfer ID to key a duplicate check on. Caught in testing, not by a customer.

WORKING WITH US

What a first engagement with us looks like.

01 One accountable point of contact

The Managing Director scopes, builds and delivers your system personally. No account manager relaying between you and the engineers — you talk to the person doing the work.

03 Cross-border by default

We already operate across Singapore, Indonesia and Japan — different time zones, currencies, banking conventions and regulatory calendars in one system is our normal case, not a special request.

02 Written scope before code

Discovery produces a document you can circulate internally for sign-off: what is being built, what it costs, and by when. Changes after that are agreed in writing, not assumed.

04 Support does not end at launch

Delivery includes documentation and a support period after go-live. The system is built to be handed to your own team or ours to maintain — your choice, stated up front.

SELECTED WORK

Systems running in production.

Client names withheld under confidentiality; every figure can be walked through on a call.

An exporter running its operations on spreadsheets and chat

CROSS-BORDER TRADE · JAPAN

Inventory in a spreadsheet, payments reconciled by hand. An earlier offshore vendor had delivered a CRM the team could not use. We rebuilt it: inventory, role-scoped CRM, invoice and shipping documents, bank-statement import.

2 money-losing bugs caught before release · live · bilingual JP / EN

An AI co-pilot that answers from the company's own documents

AI IMPLEMENTATION · SINGAPORE

A generic chatbot is worthless to an SME knowledge worker — it knows nothing about their role or sector. We built a co-pilot with retrieval over the client's own documents.

Live production API, paying client · multi-LLM routing

A payroll engine an accountant can audit line by line

FINANCIAL SYSTEMS · SINGAPORE & INDONESIA

Singapore payroll compliance is unforgiving — CPF rounding, age bands, SDL floors and caps. Ours is verified against CPF Board tables scenario by scenario.

7,060 automated tests, 484 calculator classes

This document contains commercially confidential information and is intended solely for the named recipient.

A health record the patient owns, not the hospital

HEALTHCARE · INDONESIA & SOUTHEAST ASIA

Patients moving between Indonesian and Singaporean providers carry their history in paper folders. Provider systems do not talk to each other. We built a trilingual, patient-owned platform.

3 languages, one codebase · data residency by design

WHAT WE BUILD

Custom software across four practices.

BUSINESS SYSTEMS

Operations platforms, CRM, inventory, document generation and workflow — replacing spreadsheets and disconnected tools with one system your team will actually use.

CROSS-BORDER OPERATIONS

Multi-currency, multi-jurisdiction systems for companies operating across Singapore, Indonesia and Japan — one system, not three.

AI IMPLEMENTATION

Retrieval over your own documents, domain-tuned models and automation pipelines, with guardrails and source attribution so the output can be checked.

FINANCIAL & COMPLIANCE SYSTEMS

Accounting engines, reconciliation, payroll compliance and regulatory reporting for businesses that answer to a regulator or an auditor.

HOW WE WORK

Discovery to production, on a schedule you can plan around.

WEEK 1-2

Discovery

Sit with the people doing the work
· written scope and cost range

WEEK 3-4

Architecture

Technical design · firm price and
delivery date agreed in writing

WEEK 5-8

Build

Working system against real data
· weekly check-ins, not a reveal at
the end

WEEK 9-11

Deployment

Testing, staff handover · deployed
on infrastructure you own

WEEK 12+

Support

Agreed support period ·
documentation so any engineer
can take over

Timelines scale with scope — this is the shape of a mid-size engagement, not a fixed promise. You get the real schedule after discovery, in writing.

CONTACT

Let's talk about what you're building.

Free first call, no brief document required — bring the process that costs you the most time. If software is not the answer, we will tell you that too.
