

COMPANY PROFILE

We build the software your business runs on.

Business. Finance. Tech.

A Singapore-based custom software house. We design and build production systems for companies that have outgrown spreadsheets, off-the-shelf tools, or a vendor that did not deliver.

SINGAPORE | JAPAN | 20+ YEARS

WHO WE ARE

Founder-led, start to finish.

StarTech Innovation is a custom software house, not a product vendor. We do not sell you a shelf system and hope it fits — we build the system around how your business actually runs: operations, customers, stock, invoices and the documents in between.

Every engagement is led personally by the Managing Director, start to finish, with specialists brought in as the work demands. You deal with the person who writes the code and signs the delivery.

Much of our work starts because an earlier vendor, or an off-the-shelf tool, did not hold up. Our live client work runs between Singapore and Japan, so different currencies, languages and banking conventions in one system are our normal case, not a special request.

WHERE WE WORK

Singapore

Home base · SMEs replacing spreadsheets, chat threads and disconnected tools

Japan

Live client work in cross-border trade · Japanese and English in one system

Across the region

Multi-currency systems for companies trading between offices and time zones

WORKING WITH US

One accountable point of contact

The Managing Director scopes, builds and delivers your system personally. No account manager relaying between you and the engineers.

Written scope before code

A paid two-week scoping sprint produces a written scope, a cost and a clickable demo you can circulate for sign-off. The fee is credited against the build.

Tested, not demoed

Tests are written against your real business rules, not the happy path. On a live client system they caught two money-losing bugs before release.

You own the build

Deployed on your cloud account, your database and your repository, with documentation so any engineer can take it over. A monthly care plan is optional.

This document contains commercially confidential information and is intended solely for the named recipient.

WHAT WE BUILD

Custom software across four practices.

Business systems

Operations platforms, CRM, inventory, document generation and workflow — one system your team will actually use.

- Operations platforms built around your process
- Role-scoped CRM and customer records
- Inventory, quotations and document generation
- Imports from the spreadsheets you already keep

AI implementation

Assistants that answer from your own documents, and automation pipelines — with sources shown so the output can be checked.

- Answers drawn from your documents, with sources
- Claude, GPT or Gemini, chosen per task
- Reading receipts, invoices and forms
- A person signs off where money or customers are involved

Finance workflows

Invoicing, bank-statement import, reconciliation and document generation — with an audit trail your accountant can check.

- Proforma and commercial invoices
- Bank-statement import with duplicate checks
- Reconciliation your team reviews and signs off
- An audit trail behind every figure

Cross-border operations

Multi-currency, multi-language systems for companies trading between Singapore, Japan and the region — one system, not three.

- Multi-currency pricing, payments and documents
- Japanese and English interfaces, in production
- Shipping instructions and export paperwork
- One system across offices and time zones

TRY BEFORE YOU COMMIT

Thirteen working demos at startech-innovation.com/solutions show the kind of tools we build, each with a sample you can open and download. Pick one, and we will build it around your own data:

Receipt & Invoice Scanner · Customer Support Chatbot · Appointment Booking · Quotation Generator · Job Posting Writer · Inventory Tracker · Social Media Manager · Document Translator · Employee Onboarding · Sales Assistant · Compliance Checker · Training Content Generator · Financial Report Builder

This document contains commercially confidential information and is intended solely for the named recipient.

SELECTED WORK

What we have built, and where it stands.

Operations system for a vehicle exporter

CROSS-BORDER TRADE, JAPAN

Inventory lived in a spreadsheet and payments were reconciled by hand; an earlier offshore vendor had delivered a CRM the team could not use. We rebuilt it: inventory, role-scoped CRM, invoice and shipping documents, bank-statement import. Two money-losing bugs were caught before release. Live with the client, in Japanese and English.

AI co-pilot over a company's own documents

AI IMPLEMENTATION, SINGAPORE

A generic chatbot knows nothing about an SME knowledge worker's role or sector. We built a co-pilot that answers from the client's own documents, with routing across several language models. Delivered; the engagement completed in 2026.

An ERP built to be audited line by line

INTERNAL BUILD, SINGAPORE

Singapore rules are unforgiving — CPF rounding and age bands, SDL floors and caps. We are building an ERP, payroll included, that shows its working for every figure: 484 calculation classes covered by 7,060 automated tests. In development, not yet deployed.

Demos you can try before you commit

PRE-SALES, JAPAN & SINGAPORE

We show a system working before a client signs. Our Japan site runs demos for used-car exporters — auction, shipping tracking, export quotes — and our Singapore site runs thirteen more.

HOW WE WORK

Discovery to production, on a schedule you can plan around.

WEEK 1–2
Scoping sprint
Written scope, cost and a clickable demo

WEEK 3–4
Architecture
Technical design; firm price and date in writing

WEEK 5–8
Build
Working system on real data, with weekly check-ins

WEEK 9–11
Deployment
Testing and staff handover, on infrastructure you own

WEEK 12+
Care plan
Monthly hosting, fixes and small changes

TECHNOLOGY

AI
Anthropic Claude · OpenAI GPT · Google Gemini · Whisper

CLOUD
Cloudflare Workers · AWS Bedrock, SageMaker, Lambda

BACKEND
TypeScript · Java Spring Boot · PostgreSQL

FRONTEND
React · TanStack Start · Tailwind

This document contains commercially confidential information and is intended solely for the named recipient.

NEXT STEP

Send us one spreadsheet.

Pick the spreadsheet you would most like to replace, and we will show it working as a system — free, no commitment. If software is not the answer, we will tell you that too.

Free demo built from your spreadsheet · No commitment

> Singapore grants: PSG closed on 29 September 2026 and was replaced by the EDGE Grant from Enterprise Singapore. A business system with at least three functions, such as sales, inventory and finance, can be supported even when the vendor is not on the pre-approved list. Apply before the project starts; the grant is paid back once the project is finished and paid for. We check whether your project may qualify, and prepare the vendor documents at no charge, before you commit.
