CAPABILITY DECK

We build the software your business runs on.

Business. Finance. Tech.

A Singapore-based custom software house. We design and build production systems for companies that have outgrown spreadsheets, off-the-shelf tools, or a vendor that did not deliver.

SINGAPORE | JAPAN | 20+ YEARS

WHO WE ARE

Founder-led, start to finish.

StarTech Innovation is a custom software house, not a product vendor. We do not sell you a shelf system and hope it fits — we build the system around how your business actually runs.

Every engagement is led personally by the Managing Director, start to finish, with specialists brought in as the work demands. You deal with the person who writes the code and signs the delivery.

12

Weeks from discovery to deployment, for a typical full build

7,060

Automated tests in our Singapore payroll engine

2

Money-losing bugs caught before release on a live client system

20+

Years combined business and engineering experience

This document contains commercially confidential information and is intended solely for the named recipient.

HOW WE WORK

We are hired to fix what did not work the first time.

Much of our work starts because an earlier vendor, or an off-the-shelf tool, did not hold up. That shapes how we build.

DISCOVERY FIRST

Week 1

We sit with the people doing the work before writing code. You own the output either way.

FIXED SCOPE, CLEAR COST

Before build

A price range on the first call, a firm number after discovery — agreed in writing before work starts.

TESTED, NOT DEMOED

Every build

Tests written against the real business rules, not the happy path. Our payroll engine alone carries 7,060.

YOU OWN THE BUILD

At delivery

Deployed on your cloud account, your database, your repository. Any engineer can take it over.

WHAT THAT DISCIPLINE CATCHES

Rebuilding a cross-border trading system, a re-imported bank statement was silently doubling receipts — the bank issued no transfer ID to key a duplicate check on. Caught in testing, not by a customer.

This document contains commercially confidential information and is intended solely for the named recipient.

WORKING WITH US

What a first engagement with us looks like.

01 **One accountable point of contact**

The Managing Director scopes, builds and delivers your system personally. No account manager relaying between you and the engineers — you talk to the person doing the work.

02 **Written scope before code**

A paid two-week scoping sprint produces a document you can circulate for sign-off — what is being built, what it costs, by when — and a clickable demo. The fee is credited against the build.

03 **Cross-border by default**

Our live client work runs between Singapore and Japan — different time zones, currencies, languages and banking conventions in one system is our normal case, not a special request.

04 **Support does not end at launch**

Delivery includes documentation and a support period. After that, a monthly care plan covers hosting, fixes and small changes — or hand the system to your own team. Your choice, stated up front.

SELECTED WORK

What we have built, and where it stands.

Client names withheld under confidentiality. Each card says where the work stands; every figure can be walked through on a call.

An exporter running its operations on spreadsheets and chat

CROSS-BORDER TRADE · JAPAN

Inventory in a spreadsheet, payments reconciled by hand. An earlier offshore vendor had delivered a CRM the team could not use. We rebuilt it: inventory, role-scoped CRM, invoice and shipping documents, bank-statement import.

2 money-losing bugs caught before release · live · bilingual JP / EN

An AI co-pilot that answers from the company's own documents

AI IMPLEMENTATION · SINGAPORE

A generic chatbot is worthless to an SME knowledge worker — it knows nothing about their role or sector. We built a co-pilot with retrieval over the client's own documents.

Delivered for a client; engagement completed in 2026 · multi-LLM routing

A payroll engine built to be audited line by line

INTERNAL BUILD · SINGAPORE

Singapore payroll rules are unforgiving — CPF rounding, age bands, SDL floors and caps. We are building an engine that shows its working for every figure, tested scenario by scenario.

In development, not yet deployed · 7,060 automated tests

Demos you can try before you commit

PRE-SALES · JAPAN & SINGAPORE

We show a system working before a client signs. Our Japan site runs demos for used-car exporters — auction, shipping tracking, export quotes — and our Singapore site runs thirteen more.

WHAT WE BUILD

Custom software across four practices.

BUSINESS SYSTEMS

Operations platforms, CRM, inventory, document generation and workflow — replacing spreadsheets and disconnected tools with one system your team will actually use.

AI IMPLEMENTATION

Assistants that answer from your own documents, and automation pipelines — with guardrails and source attribution so the output can be checked.

FINANCE WORKFLOWS

Invoicing, bank-statement import, reconciliation and document generation — with an audit trail so your accountant can check every figure.

CROSS-BORDER OPERATIONS

Multi-currency, multi-language systems for companies trading between Singapore, Japan and the region — one system, not three.

This document contains commercially confidential information and is intended solely for the named recipient.

HOW WE WORK

Discovery to production, on a schedule you can plan around.

WEEK 1–2

Scoping sprint

Sit with the people doing the work · written scope, cost and a clickable demo

WEEK 3–4

Architecture

Technical design · firm price and delivery date agreed in writing

WEEK 5–8

Build

Working system against real data · weekly check-ins, not a reveal at the end

WEEK 9–11

Deployment

Testing, staff handover · deployed on infrastructure you own

WEEK 12+

Care plan

Monthly hosting, fixes and small changes · documentation so any engineer can take over

> Timelines scale with scope — this is the shape of a mid-size engagement, not a fixed promise. You get the real schedule after discovery, in writing. For Singapore companies, we check whether the project qualifies for EDGE Grant support before you commit.

CONTACT

Send us one spreadsheet.

Pick the spreadsheet you would most like to replace, and we will show it working as a system — free, no commitment. If software is not the answer, we will tell you that too.
